Subject: Theory of computation Ecosystem

1) What is entrepreneurship strategy?

→ Entrepreneurship strategy refers to the planned approach an entrepreneur uses to identify opportunities, create value, and achieve competitive advantage in the market. It involves decisions related to innovation, target customers, business model, resource allocation, risk management, and growth.

A strong entrepreneurship strategy helps a venture survive uncertainty, adapt to change, and scale sustainably.

2) Define ideation in the entrepreneurial process.

→ Ideation is the initial and creative phase of the entrepreneurial process where potential business ideas are generated, developed, and refined. It involves identifying market gaps, customer pain points, and innovative solutions. During ideation, ideas are evaluated for feasibility, desirability, and viability before moving to validation and execution.

3) What is meant by "from ideation to exit" in entrepreneurship?

→ "From ideation to exit" describes the complete lifecycle of an entrepreneurial venture. It starts with idea generation (ideation), followed by opportunity evaluation, business planning, product development, market entry, growth and scaling. The journey ends with an exit, where founders or investors leave the venture by transferring ownership or monetizing their stake.

4) What is an exit strategy in entrepreneurship?

→ An exit strategy is a planned method for entrepreneurs or investors to withdraw from a business, usually to realize returns on investment or ship to new ventures. It outlines when, how and to whom ownership will be transferred, helping reduce uncertainty and align long-term business decisions with financial goals.

5) Name two common exit strategies for startups.

→ The two common exit strategies for startups are:-

i) Acquisition:

The startup is purchased by another company, often for strategic growth or technology.

ii) Initial Public Offering (IPO):

The company offers shares to the public and gets listed on a stock exchange.
