

Assignment:- 3

Name: Kaushal Kumar Ray

Branch: B-Tech CSE with AI & ML

PRN: 240205241023

Subject: TOCE

Semester: IV

Define open innovation.

- open innovation is a model where organizations use external and internal ideas to accelerate innovation.

Explain the concept of agile project management.

- Agile project management is an interactive approach focusing on flexibility, collaboration, and quicker delivery.

What are stakeholders in innovation projects?

- Stakeholders are individuals or groups who have an interest or influence in a project. They include customers, investors, employees, and partners.

Explain the importance of stakeholders management.

- Stakeholders management ensure proper communication and alignment of expectations. It helps in reducing conflicts and increasing project success.

What are agile methodologies?

- Agile methodologies are frameworks used to implement agile principles in project management. ex include Scrum, Kanban, & Extreme programming (XP).

Define innovation project management?

- Innovation project management involves planning & executing projects based on new ideas or products.

Explain the concept of converting ideas into products.

- It involves transforming innovative ideas into marketable products through design, testing and development.

What are the key features of agile development.

- Key features include iterative development, customer feedback, flexibility and team collaboration.

Define performance indicators in innovation projects.

- Performance indicators are measurable metrics used to evaluate project success. They track progress, efficiency and outcomes.

Explain the importance of collaboration in open innovation.

- Collaboration allows sharing of knowledge & resources across organizations. It leads to faster innovation & better solutions.

What is stakeholder mapping?

- Stakeholder mapping is the process of identifying & analyzing stakeholders based on influence & interest. It helps prioritize engagement strategies.

Explain the role of investors in innovation ecosystems.

- Investors provide financial support to develop and scale innovations. They also offer strategic guidance & industry connections.

Define product development process in innovation management.

- It is a structured approach to designing, developing, and launching new products. It includes stages like idea generation, design, testing, and launch.

Explain the importance of agile methodologies in innovation projects.

- Agile methodologies enable quick adaptation to changing requirements.

Discuss the role of customers as stakeholders in innovation projects.

- Customers provide feedback and validate product ideas. Their needs guide product development and improvements.

Explain the concept and importance of open innovation in modern organizations.

- open innovation integrates external ideas to enhance internal innovation processes. It increases competitiveness and reduces development costs.

Discuss the role of agile methodologies in managing innovation projects.

- Agile methodologies supports flexibility and rapid iteration in innovation projects. They ensure faster delivery and continuous improvements.

Discuss the role of collaboration in open innovation models.

- Collaboration enables sharing of expertise and resources. It leads to faster and more efficient innovation outcomes.

Explain the management challenges in open innovation projects.

- Challenges include intellectual property issues, coordination, & trust among partners.

managing diverse stakeholders can also be complex.

Analyse the importance of flexible project management in innovation ecosystems.

- Flexibility allows quick adaption to changes and uncertainties.
It enhances innovations and reduce failure risks.

Discuss how agile approaches improve product development efficiency.

- Agile ensure faster delivery through iterative development.
It reduces waste & improves quality with continuous feedback.

Evaluate the role of stakeholders engagement in innovation success.

- stakeholders engagement ensures support, feedback & resource availability. Active involvement increases the chance of successful innovation.
